Keynote speakers

Professor Cees van der Vleuten, Professor of Education, Maastricht University, The Netherlands

Professor Adrian Freeman, Professor of Medical Education, University of Exeter Medical School, UK

Professor Carlos Collares, Assistant Professor, Maastricht University, The Netherlands

Progress Testing (PT) is a powerful assessment tool to evaluate the continuing growth of student knowledge during the length of a course.

It provides frequent and regular observations that permit rapid remediation interventions. It delivers regular feedback to students on their performance and how to direct their learning. After a lengthy and often expensive course, this testing methodology prevents any surprises about performance during their final exams. It helps to consolidate learning in curriculum areas and offers valuable feedback to faculty on their teaching.

Already implemented in schools and institutions around the world, it sits comfortably within the concepts of programmatic assessments. Plus, it is used in undergraduate and postgraduate training in many disciplines and for many purposes.

This one day conference, organised by Prof Adrian Freeman, is a joint collaboration between the University of Exeter Medical School and the European Board of Medical Assessors, and will take the form of interactive plenaries and short oral presentations.

Topics will include:

- Understanding progress testing
- The psychometrics of progress testing
- Different contexts for progress testing
- An assessment tool for the future?

Audience

Open to all. Those experienced with PT can come and present academic findings; and those new to PT can learn more about it and present their academic questions.

For a full programme for the day (including speakers, workshop themes and facilitators) visit www.exeter.ac.uk/medicine/cpd

For general enquiries:
